POST-SURGICAL COLLAGEN KIT

# Your patients already go home with dressings. Your practice can be the one that supplies them.

A collagen dressing kit for the incision, shipped to the patient's home the day after surgery. Your practice dispenses it and bills it as DME under your own NPI. Supplied through Regenerative Care.

## WHAT'S IN THE KIT

### Collagen primary dressing

Type 1 bovine collagen sheet placed directly on the incision. For open or tunneling wounds, collagen powder instead. Collagen supports the wound bed and has been used in wound care for decades.

### Silicone border dressing

Absorbent and shower proof. Protects the site, reduces bacterial contamination and maceration. Gentle on skin at removal.

### Adhesive island dressing

Soft non-adherent pad with an adhesive border that holds everything in place. Water resistant for daily life at home.

- **Sold by the day.** 1 to 30 days, one dressing change per day. Each day's dressings in their own pouch with gloves, tape and instructions.
- **Sheets vs powder.** Sheets for incisions. Powder for open or tunneling wounds. Never both on the same site.
- **Patient support.** Printed care guide, step-by-step videos for their procedure, and a PA/NP line 12 hours a day. Your front desk doesn't field the calls.
- **Sizes.** Collagen Matrix 2 × 2 for closed incisions. Collagen Matrix XL 7 × 7 for long incisions, fusions, joints and trauma.
- **Coding.** Standard surgical dressing HCPCS codes: A6021 to A6024 for collagen sheets, A6010 and A6011 for powder, plus secondary dressing codes.
- **Safety.** Only known risk is rare bovine allergy with mild inflammation. Full specifications and indications available on request.

**Fits:** independent private practice with its own NPI, in-network with commercial payers or Medicare. Any open incision or surgically treated wound.

You decide medical necessity, product, size and duration, patient by patient. Staff time is about two minutes per patient. One invoice per kit, net 30 or 45.

## FROM SURGERY SCHEDULE TO PAID CLAIM

1. **Intake**
   Staff upload the face sheet and insurance card.
2. **Verified**
   Benefits and prior auth recorded on the case.
3. **Op note**
   Upload after surgery. Codes are read from it.
4. **You sign**
   One signature on the order.
5. **Ships**
   Next day to the patient's home. Delivery confirmed.
6. **Claim**
   Invoice and CMS-1500 generate from the same record.

### Billed by your practice

You buy the kit and bill the patient's insurance under your NPI. One record generates the order, the invoice and the claim.

### Verified before it ships

If the plan does not authorize it, nothing ships and nothing is billed. Proof of delivery uploads automatically.

### No inventory, no staff burden

Nothing stocked in your office. Patient questions go to the PA line, not your MAs.

## THE FOUR KITS

| Kit | For | Dressing | Days per pack |
|---|---|---|---|
| **Collagen Matrix 2 × 2** | Closed incisions up to 5 cm, scope ports | 2 × 2 in collagen sheet, 4 x 4 in adhesive island | 30 |
| **Collagen Matrix XL 7 × 7** | Long incisions, fusions, joints, trauma, breast, C-section | 7 × 7 in collagen sheet, 6 × 8 in sterile island | 15 (two packs for 30 days) |
| **Collagen Powder** | Open or tunneling wounds | 1 g collagen powder, 4 × 4 in adhesive island | 30 |
| **Powder + Antimicrobial Gauze** | Open wounds with infection risk | 1 g collagen powder, 4 × 4 in antimicrobial gauze | 30 |

One kit per incision. Sold by the day, 1 to 30 days, one change per day; the surgeon sets the days on the order. Type 1 bovine collagen, billed under standard surgical dressing HCPCS codes (A6021 to A6024 sheets, A6010 and A6011 powder). Every pack includes conforming stretch bandage, gloves and waterproof tape. Pricing and payer fee schedules are reviewed with your office manager and biller at the meeting.

## Fifteen minutes, in person or by video

We walk you and your office manager through the order form, coverage and the portal. Bring your biller.
